

Bharat Chundru

Full Stack Software Engineer

Email: bharatchundru1@gmail.com | 217 953 5539 | Atlanta, GA | linkedin.com/in/bharatchundru

Summary

Full Stack Software Engineer with 3+ years of experience building scalable cloud-native applications in healthcare and banking domains. Expertise in Java, Spring Boot, React, AWS, microservices, Kafka, and PostgreSQL, with hands-on experience integrating GenAI solutions using AWS Bedrock, OpenAI APIs, and RAG pipelines. Proven track record of improving API performance, automating workflows, and delivering secure enterprise systems supporting high-volume transactional workloads.

Core Competencies

Java, Spring Boot, React, Next.js, AWS, Kubernetes, Kafka, PostgreSQL, Redis, Microservices, REST APIs, OAuth2, JWT, GenAI, AWS Bedrock, RAG Pipelines, Docker, CI/CD

Technical Skills

- **Languages:** Java (17/21), Python, JavaScript/TypeScript
- **Frontend:** React, Redux, Next.js, Vue.js, HTML, CSS, Bootstrap, Material UI
- **Backend & Frameworks:** Spring Boot, Spring MVC, Spring Cloud, Spring Security, Hibernate, Microservices, REST APIs, JPA
- **AI & GenAI:** AWS Bedrock, OpenAI API, LLM integration, LangChain, RAG pipelines, Agentic AI workflows, Prompt Engineering
- **Databases:** Oracle, PostgreSQL, MongoDB, MySQL, Redis
- **Messaging & Security:** Apache Kafka, OAuth2, JWT
- **Cloud & DevOps:** AWS (S3, EKS, Lambda, CDK, Bedrock, API Gateway), Docker, Kubernetes, Jenkins, GitHub Actions
- **Methodologies:** Agile (Scrum), TDD, BDD

Professional Experience

Humana, Louisville, KY (Remote)

Jan 2024 – Present

AI Full Stack Engineer

- Designed and developed GenAI-powered healthcare workflows using AWS Bedrock, OpenAI APIs, RAG pipelines, and prompt orchestration, reducing manual data entry effort by 30% across multiple product teams.
- Built scalable Java Spring Boot microservices supporting healthcare claims and eligibility systems processing 40–60 TPS under peak production workloads.
- Developed high-performance React and Next.js frontend components improving user workflows and application responsiveness for 10,000+ active users.
- Improved API response times by 40% through Redis caching, PostgreSQL query optimization, and index tuning for high-volume eligibility verification services.
- Designed event-driven microservices architecture using Apache Kafka to process 5M+ healthcare events daily across distributed systems.
- Secured enterprise applications using Spring Security, OAuth2, JWT, and RBAC controls to maintain HIPAA-compliant authentication and authorization.
- Containerized applications using Docker and deployed services on Amazon EKS (Kubernetes), improving scalability and deployment consistency.
- Automated cloud infrastructure provisioning using AWS CDK, Lambda, API Gateway, DynamoDB, and CI/CD pipelines with Jenkins and GitHub Actions.

Truist Bank, Atlanta, GA

Mar 2023 – Aug 2023

Full Stack Software Engineer

- Developed React.js and Redux-based banking applications for transaction management, payment scheduling, and customer account workflows.

- Built Java Spring Boot microservices and REST APIs supporting millions of daily banking transactions across consumer and commercial platforms.
- Secured enterprise financial APIs using OAuth2, JWT, and role-based access controls for sensitive customer and transaction data.
- Improved transaction API performance by 35% through PostgreSQL query optimization, execution plan tuning, and Redis caching.
- Implemented CI/CD pipelines using GitHub Actions, reducing deployment times by 40% and improving release reliability.
- Collaborated within Agile Scrum teams to deliver production enhancements, hotfixes, and scalable banking features with high sprint completion rates.

Coforge, Hyderabad

Software Engineer

May 2021 – Jul 2022

- Developed responsive React.js applications for digital banking platforms supporting account management and payment workflows.
- Built Java Spring Boot microservices for transaction enrichment, customer profile management, and payment processing systems.
- Built Java Spring Boot microservices for transaction enrichment, customer profile management, and payment processing systems.
- Secured financial applications using OAuth2, JWT, and AWS Cognito-based authentication and authorization mechanisms.
- Optimized MongoDB schemas and indexing strategies, improving query performance by 30% under concurrent financial workloads.
- Automated CI/CD pipelines using Jenkins and AWS deployment workflows, reducing release cycles and improving deployment consistency.

Education

Master of Science in Computer Science
University of Illinois Springfield

Aug 2022 – Dec 2023

Bachelor of Technology in Computer Science
SRM University – India

Jun 2018 – May 2022

Certifications

- AWS Certified Developer – Associate.
- Claude Code in Action – Anthropic.
