

Bharat Chundru

Software Engineer

Email: bharatchundru1@gmail.com | 949248533 | Hyderabad |

<https://www.linkedin.com/in/bharatchundru/>

Summary

Software Engineer with 3+ years of experience building scalable cloud-native applications. Expertise in Java, Spring Boot, React, AWS, microservices, Kafka, and PostgreSQL, with hands-on experience integrating GenAI solutions using AWS Bedrock, OpenAI APIs, and RAG pipelines. Proven track record of improving API performance, automating workflows, and delivering secure enterprise systems supporting high-volume transactional workloads.

Technical Skills

- **Languages:** Java (17/21), JavaScript/TypeScript
- **Frontend:** React, Redux, Next.js, HTML5, CSS, Material UI
- **Backend & Frameworks:** Spring Boot, Spring MVC, Spring Security, Hibernate, Microservices, REST APIs, JPA
- **Databases:** Oracle, PostgreSQL, MongoDB, MySQL, Redis
- **Messaging:** Apache Kafka
- **Cloud & DevOps:** AWS, Docker, Kubernetes, Jenkins, GitHub Actions, Git, AWS CDK
- **AI:** AWS Bedrock, OpenAI API, LangChain, RAG pipelines, Prompt Engineering
- **Methodologies:** Agile (Scrum), TDD, BDD

Professional Experience

FedEx, Atlanta, GA

Feb 2026 – Present

Software Engineer

- Developed and maintained Java Spring Boot microservices powering core logistics APIs including package tracking, shipment scheduling, and delivery status enrichment processing millions of events daily with sub-200ms response time SLAs.
- Built responsive React (Hooks, Redux) frontend components for FedEx internal operations dashboards, enabling real-time package visibility and workflow management for 5,000+ operations staff across regional hubs.
- Integrated OpenAI based AI recommendations into the shipment routing system, leveraging prompt engineering and lightweight RAG patterns to surface intelligent route suggestions, reducing manual dispatch decisions by 20%.
- Designed and optimized RESTful APIs for cross-functional integration between tracking, billing, and customer notification services, improving inter-service data consistency and reducing downstream errors by 25%.
- Applied PostgreSQL query optimization and Redis caching strategies to shipment lookup services, achieving a 35% reduction in average API response times under high-concurrency peak periods.
- Secured logistics APIs using OAuth2 and JWT with role-based access control, ensuring compliant, least-privilege access to sensitive shipment and customer PII data across 6+ services.
- Implemented CI/CD pipelines using Jenkins and GitHub Actions for automated build, test, and deployment of microservices to AWS EKS, cutting release cycle time by 40% and improving deployment reliability across logistics service environments

Humana, Louisville, KY (Remote)

Jan 2024 – Feb 2026

Software Engineer

- Designed and developed GenAI-powered healthcare workflows using AWS Bedrock, OpenAI APIs RAG pipelines, and prompt orchestration, reducing manual data entry effort by 30% across multiple product teams.
- Built scalable Java Spring Boot microservices supporting healthcare claims and eligibility systems processing 40–60 TPS under peak production workloads.
- Developed high-performance React and Next.js frontend components improving user workflows and application responsiveness for 10,000+ active users and average page load time by 35% through code splitting, lazy loading, and memoization.

- Improved API response times by 40% through Redis caching, PostgreSQL query optimization, and index tuning for high-volume eligibility verification services.
- Designed event-driven microservices architecture using Apache Kafka to process 5M+ healthcare events daily across distributed systems.
- Secured enterprise applications using Spring Security, OAuth2, JWT, and RBAC controls to maintain HIPAA-compliant authentication and authorization.
- Containerized services with Docker and deployed on Amazon EKS (Kubernetes), automated infrastructure provisioning with AWS CDK (Lambda, API Gateway, DynamoDB), reducing manual setup time by 50%.

Truist Bank, Atlanta, GA

Mar 2023 – Aug 2023

Software Engineer

- Developed React.js and Redux-based banking applications for transaction management, payment scheduling, and customer account workflows.
- Built Java Spring Boot microservices and REST APIs supporting millions of daily banking transactions across consumer and commercial platforms.
- Secured enterprise financial APIs using OAuth2, JWT, and role-based access controls for sensitive customer and transaction data.
- Improved transaction API performance by 35% through PostgreSQL query optimization, execution plan tuning, and Redis caching.
- Implemented CI/CD pipelines using GitHub Actions, reducing deployment times by 40% and improving release reliability.
- Collaborated within Agile Scrum teams to deliver production enhancements, hotfixes, and scalable banking features with high sprint completion rates.

Education

Master of Science in Computer Science

Aug 2022 – Dec 2023

University of Illinois Springfield

Bachelor of Technology in Computer Science

Jun 2018 – May 2022

SRM University – India

Certifications

- AWS Certified Developer – Associate.
- Claude Code in Action – Anthropic.
